

Panduan Migrasi one-document-nonlab (Production)

1) Cek folder lama dan folder baru

```
““bash
ssh <user>@<host>
ls -ld /home/one/project/one/one-media/one-document-nonlab
ls -ld /mnt/volume_sgp1_1778902074763/one-document-nonlab
““
```

2) Sinkron file dari folder lama ke folder baru

```
““bash
rsync -r --size-only --checksum \
/home/one/project/one/one-media/one-document-nonlab/ \
/mnt/volume_sgp1_1778902074763/one-document-nonlab/
““
```

3) Pastikan permission folder baru benar

```
““bash
chown -R www-data:one /mnt/volume_sgp1_1778902074763/one-document-nonlab
chmod -R 775 /mnt/volume_sgp1_1778902074763/one-document-nonlab
““
```

4) Backup folder lama lalu ubah jadi symlink

```
““bash
cd /home/one/project/one/one-media
ts=$(date +%Y%m%d%H%M%S)
mv one-document-nonlab one-document-nonlab_bak_${ts}
ln -s /mnt/volume_sgp1_1778902074763/one-document-nonlab one-document-nonlab
““
```

5) Verifikasi symlink

```
““bash
ls -ld /home/one/project/one/one-media/one-document-nonlab
““
```

Output yang diharapkan:

```
- 'one-document-nonlab -> /mnt/volume_sgp1_1778902074763/one-document-nonlab'
```

6) Verifikasi URL lama untuk print

```
““bash
curl -k -I https://<domain-production>/one-media/one-document-nonlab/<nama_file_yang_ada>
““
```

Target minimal:

```
- HTTP '200'
```

7) Uji aplikasi end-to-end

- Upload dokumen nonlab
- Get list dokumen
- Download dokumen
- Delete dokumen
- Print/merge report yang menyertakan attachment nonlab

```
## 8) Rollback cepat jika ada masalah
""bash
cd /home/one/project/one/one-media
rm one-document-nonlab
mv one-document-nonlab_bak_<timestamp> one-document-nonlab
""
```

Catatan

- Di environment devcpone, skema ini sudah diuji: symlink aktif dan URL lama tetap 'HTTP 200'.
